Rare earth doped optical amplifiers work much like a laser. The primary difference is that they do not have a resonator. Amplification occurs primarily through the stimulated emissionprocess. The medium is pumped until a population inversionstate is achieved.

SECTION 5: OPTICAL AMPLIFIERS

Laser pumping is the act of energy transfer from an external source into the gain medium of a laser.The energy is absorbed in the medium, producing excited states in its atoms. When the number of particles in one excited state exceeds the number of particles in the ground state or a less-excited state, population inversion is achieved. In this condition, the mechanism of stimulated
