Subjective Refraction and Prescribing Glasses

The Number One (or Number Two) Guide to Practical Techniques and Principles *Slack*

Basic refraction is a foundational part of ophthalmology, and yet beginning ophthalmology residents and ophthalmic technicians are often left on their own to learn the finer points. Despite being core skills, the techniques and practical aspects of subjective refraction and prescribing glasses are often developed by trial and error, if they are developed at all. Subjective Refraction and Prescribing Glasses: The Number One (or Number Two) Guide to Practical Techniques and Principles, Third Edition is designed as a complete guide to those essential skills, offering everything from basic terminology to tips, tricks, and best practices. This updated Third Edition has been expanded in every section with thoughtful, practical advice, and has case scenarios, in a question and answer format, of situations encountered with real-world patients. It is the most comprehensive review of clinical subjective refraction to date. Drs. Richard Kolker and Andrew Kolker together have nearly 50 years of experience in the practice of ophthalmology and bring both the fresh eyes of a beginning ophthalmologist and the experience of a seasoned veteran to this Third Edition. While new residents and technicians will appreciate the thorough explanation of refractive fundamentals, even expert ophthalmologists will appreciate the practical tips that may have never occurred to them. Included are: Very clear, easy-to-read, practical explanations of the subjective refraction process Basic practical optics to explain the steps of subjective refraction The Jackson Cross Cylinder made easy to understand and use Plus and minus cylinder methods discussed separately and color coded for quick identification An Appendix with a primer on retinoscopy and how to use the manual lensometer The art of subjective refraction and prescribing glasses Subjective Refraction and Prescribing Glasses: The Number One (or Number Two) Guide to Practical Techniques and Principles, Third Edition is the definitive guide to the often neglected skills involved in clinical subjective refraction. Residents and technicians will find it a critical guide in their learning process, but even seasoned ophthalmologists can benefit from the tips and tricks enclosed within.

Visual Optics and Refraction : a Clinical Approach

Case Reviews in Ophthalmology *Elsevier Health Sciences*

Seasoned Elsevier authors Neil J. Friedman and Peter K. Kaiser help you get the best possible results in your exams with Case Reviews in Ophthalmology. This medical reference's case-based approach gives you just the practice you need to assess, reinforce, and broaden your mastery of every essential concept in ophthalmology for clinical rounds, oral boards or recertification. Review key information on every aspect of ophthalmology: optics/refraction; neuro-ophthalmology/orbit; pediatrics/strabismus; external disease/adnexa; anterior segment; and posterior segment. Learn from the experts with contributions from an all-star duo of seasoned authors. Enhance your fundamental knowledge in ophthalmology and reinforce learning objectives using 100 illustrated cases. Access the complete contents online at www.expertconsult.com. The case-based resource you need to prepare for the American Board of Ophthalmology oral exam

Last-Minute Optics: A Concise Review of Optics

Last-Minute Optics: A Concise Review of Optics, Refraction, and Contact Lenses is a unique resource that boils down the overwhelming subject matter of clinical optics and refraction, helping the ophthalmologist cover the essentials in a single review manual.

Optics *Butterworth-Heinemann Medical*

Thoroughly updated and revised, this definitive textbook continues to be the best available resource on the theory of optics and applications in optometry, ophthalmology, and vision science. It presents a complete overview of basic topics in optics and provides a strong foundation for further learning. Comprehensive information on optics makes this book the definitive source on the subject. A bright, two-color design enhances the text and aids the reader's understanding. Completely updated and revised to present the latest information in the field. All illustrations are now highlighted with a second color to aid understanding. A new color plate section provides clear, excellent-quality photographs to vividly illustrate important concepts. More information is included on aspheric lenses, with a new chapter on aspheric lenses. Many new questions and exercises reinforce important points and help readers understand the material. The contents have been entirely reorganized for a more logical, easy-to-follow approach. A new glossary defines all key terms from the chapters for convenient reference.

Revision in Optics and Refraction *CRC Press*

'Revision in Optics and Refraction' for the first time provides candidates for the Optics and Refraction Module of the MRCOphth examinations with an opportunity to practice answering MCQs and review their practical skills. The concise introduction sets out the requirements of the examination, followed by a guide to the practical skills required, with useful checklists of equipment and essential clinical questions. Four papers, each with 60 5-stem MCQs, then test knowledge in a format compatible with the actual examination. All answers are supported by detailed explanations.

Wavefront Optics for Vision Correction *SPIE Press*

This book addresses some of the issues in visual optics with a functional analysis of ocular aberrations, especially for the purpose of vision correction. The basis is the analytical representation of ocular aberrations with a set of orthonormal polynomials, such as Zernike polynomials or the Fourier series. Although the aim of this book is the application of wavefront optics to laser vision correction, most of the theories discussed are equally applicable to other methods of vision correction, such as contact lenses and intraocular lenses.

Review Questions in Ophthalmology *Lippincott Williams & Wilkins*

Approach your exams with confidence using Review Questions in Ophthalmology, Third Edition. You'll find a concise review of all specialty rotations in ophthalmology, plus key areas such as embryology, anatomy, pediatrics, plastics, and lenses. Real-life clinical cases and more than 1,000 multiple choice questions with answers and explanations in this comprehensive review of ophthalmology provide core knowledge for all residents and fellows in ophthalmology, preparing you for success - both on your exams and in your practice! Test yourself with 1,000+ multiple choice questions, including answers and explanations. Clearly visualize what you're likely to see on exams and in practice, thanks to more than 400 clinical photographs, fluorescein angiograms, and CT, MRI, and ultrasound images. Focus on common diseases for more useful self-assessment and real-life clinical preparation.

Clinical Optics

Keep your ophthalmic knowledge current with the Academy's 2017-2018 Basic and Clinical Science Course (BCSC). BCSC is the most extensive compilation of ophthalmic scientific research and clinical experience, and it is continually updated by a faculty of more than 80 expert ophthalmologists. Topics covered in Section 3 include optics of the human eye, clinical refraction and ophthalmic instruments. It provides an overview of refractive surgery. Includes numerous figures and learning exercises.

Refractive Anomalies

Research and Clinical Applications *Butterworth-Heinemann Medical*

A singular contribution to the science of refractive anomalies and their clinical managment, this classic text addresses "the problem of myopia."

Ophthalmology

Current Clinical and Research Updates *BoD - Books on Demand*

This book brings together both a review and updates in clinical and research areas. The chapters will be of interest to a wide audience. On one hand, the review and update of clinical practices will interest students and residents, on the other, cutting edge research chapters will be of interest to the researchers in the field. The book is divided into four parts: 1) Review and Updates in Diagnostic Testing, 2) Updates in Anterior Segment Diseases, 3) Updates in Posterior Segment Diseases, and 4) Updates in Research in Ophthalmology, Optometry and Vision Science. The chapters are written by experts and individuals with special interests in topics with a focus on clinical application and translational benefit to eye care.
