The hypotenuse is the longest side, and perpendicular is the side opposite to the hypotenuse side. Consider the triangle above, where a is the perpendicular side, b is the base side, and c is the hypotenuse. According to the definition of the Pythagorean theorem, the formula would be written as: $c^2 = a^2 + b^2$.

Can I use the Pythagorean theorem to find distance? Yes. You can obtain the equation for finding the distance from the Pythagorean theorem. The distance between A and B on the plane is the square root of $(x_1 - x_2)^2 + (y_1 - y_2)^2$. You can use the distance formula when you have the x and y coordinates of the two points on the Cartesian plane. After you plot the two points respectively forming a right triangle, the diagonal line that connects points A and B is the hypotenuse.

We know the length of two sides of the triangle and to determine the length of the hypotenuse, we just have to insert the lengths we know into the equation. $c^2 = a^2 + b^2$. $c^2 = 9^2 + 10^2$. $c^2 = 81 + 100$. $c^2 = 181$. $c = 13,5$ cm. We see now that the missing length of the hypotenuse is 13,5 cm and that is our result.

These pythagorean theorem worksheets are downloadable and printable. These pythagorean theorem worksheets all come with a corresponding printable answer page. In mathematics, the Pythagorean theorem is a relation in Euclidean geometry among the three sides of a right triangle. It states that the square of the hypotenuse (the side opposite the right angle) is equal to the sum of the squares of the other two sides.

Pythagorean Theorem Worksheets Printable -Rudolph Academy ...

It states that $c^2 = a^2 + b^2$, C is the side that is opposite the right angle which is referred to as the hypotenuse. A and b are the sides that are adjacent to the right angle. The theorem simply stated is: the sum of the areas of two small squares equals the area of the large one.

Worksheets to Practice Pythagorean Theorem Problems

By substituting the known sides into Pythagoras' Theorem $c^2 = a^2 + b^2$ (and letting the height of the wall be a) we get: $2.9^2 = a^2 + 1.3^2$. Calculating the two square roots and rearranging gives us: $a^2 = 8.41 - 1.69 = 6.72$. Then by square rooting both sides of this equation, we get: $a = \sqrt{6.72} = 2.592296279$. $a = 2.6$ cm (1 d.p.)
