Omni-Directional wheels roll forward like normal wheels, but slide sideways with almost no friction (no skidding during turns). Use these wheels to make your robot turn smoothly or build a holonomic drivetrain. VEXpro Omni-Directional Wheels are manufactured from Glass-filled Nylon with high-traction rubber rollers.

Omni-Directional Wheels - VEX Robotics

Omni-directional wheels can be thought of as normal wheels with the ability to roll or slip sideways. Think of them as powered casters. The general principle of an omni-directional wheel is that while

the main wheel provides traction in the direction normal to the motor axis, it can slide frictionless in the motor axis direction because of the small rollers.
