The AM modulation is a kind of modulation technique which is in use since the very early days of wireless data transmission. In a radio transmission

system there is a relation between the ranges of frequencies which can be transmitted wirelessly with the length of the transmitting antenna. The relation is inversely proportional to one another, means as the frequency of the signal to be ...

Circuit Design: How to make an amplitude modulated wave

The amplitude modulation is the simplest modulation technique among the wide verity of modulation techniques in use. In this technique the amplitude of a high frequency signal is varied corresponding to the variation in the amplitude of the low frequency modulating signal. The

demodulation of an AM wave can be done with only few components and unlike most of the demodulation technique there is ...

Circuit Design: How to Demodulate AM Signal

Amplitude Shift Keying (ASK) is a type of Amplitude Modulation which represents the

binary data in the form of variations in the amplitude of a signal. Any modulated signal has a high frequency carrier. The binary signal when ASK modulated, gives a zero value for Low input while it gives the carrier output for High input.. The following figure represents ASK modulated waveform along with its ...
