Forensic biomechanics is the study of injury causation by measuring forces acting on and within the human body using methods of mechanics, to determine whether such forces exceed known thresholds of injury. As such, a biomechanist possesses expertise in the fields of both mechanics and human anatomy.

Forensic Biomechanics - The Science of Injury Causation ...

Forensic Biomechanics is an analytic method intended for presentation in a court of law. The method consists of the reconstruction of an injury mechanism followed by a comparison between the injury risk of the mechanism and the injury tolerance of the individual. In recent years some courts have excluded such testimony based, in part, on the inability of experts to quantify the potential error of the methods they relied upon in reaching their conclusions.

Forensic Biomechanics is a young forensic science, its short axis of development has undergone a rapid expansion and the future appears to be a discipline that also, for example, will help to better and more intensive fighting crime. Forensic biomechanics solve issues and problems that can not be answered by any other forensic science.

FORENSIC BIOMECHANICS. Criminalistic and Forensic Application.

Forensic injury biomechanics is the science that relates mechanical forces to disruption of anatomical regions of the human body. In this review, we introduce (a) how scaling techniques can be used to describe injury severity and probability of death; (b) how a simple ratio, the factor of risk, and more sophisticated injury risk functions can be used to determine the probability of injury; and (c) how injury criteria (also known as tolerance limits) are defined for the head and neck.
