solo.rb configures Chef-Solo to look for its cookbooks, roles, and data bags

inside the current directory: the Chef repository. Chef-Solo takes its node configuration from a JSON file. In our example, we called it node.json. If you're going to manage multiple servers, you'll need a separate file for each node. Then, Chef-Solo just executes a Chef run based on the configuration data found in solo.rb and node.json.

Configuration Management with Chef-Solo

As managed environments grow, manual configuration and deployment practices can result in operational expenses growing at an alarming rate. With Chef Infra, infrastructure is defined as code, ensuring that configuration policy is flexible, versionable, testable, and human readable. Servers managed by Chef Infra are continuously evaluated against their desired state, ensuring that configuration drift is automatically corrected, and configuration changes are universally applied.
