Crown And Bridge Dental Materials

Anterior dental crowns
 or small dental bridges
 may be manufactured
 entirely of porcelain.
 These prosthetic
 restorations have
 excellent aesthetic
 properties. They are

not indicated in the
 back part of the mouth
 cavity where chewing
 pressures are very high
 because there is a risk
 of porcelain fractures
 or chipping.

Dental crown and bridge structure and manufacturing materials

The most common
 materials used for
 crowns and bridges are
 porcelain, ceramic,
 metal alloys, gold and
 acrylic. However,
 deciding which
 material will be used
 can be left up to a
 dental professional and
 lab technician, who will
 know what can work
 most effectively for
 your teeth.

Which Material Is Best For A Dental Crown Or Bridge?

As with crowns, you
 have a choice of

materials for bridges. Your dentist can help you decide which to use, based on the location of the missing tooth (or teeth), its function, aesthetic considerations and cost. Porcelain or ceramic bridges can be matched to the color of your natural teeth.

What Are Dental Crowns And Tooth Bridges?

The weakened crown of the tooth may be shortened to gum level. A post can be made of prefabricated stainless steel or fibre white post which the dentist can fit directly into the root canal, or a custom-made post can be constructed by the dental technician to accurately fit the shape of the prepared root canal.

Dental Bridge: 4 Types, Benefits, Use Case and Costs

A dental bridge essentially bridges a gap in your mouth. It involves replacing a missing tooth with a false tooth which is bonded to the natural teeth on either side of the gap. There are two main types of dental bridge. The most common type consists of two crowns, made of porcelain or metal, which are permanently bonded to your natural teeth either side of the space, with the false tooth (or teeth) in the middle.
