Variables can be defined at any level and the study of those variables and their interactions is generally known as multilevel or mixed-effects modeling. Mathematically, mixed-effects models can be seen as a hierarchical system of regression equations where L1 parameters are function of the L2 equations. The following equations represent a two-level model with one L1 predictor, X, and one L2 predictor, W. Level-1:
$$Y_{ij} = \beta_0 + \beta_1 X_{ij} + r_{ij}$$
