Fastener Edge Distance and Spacing Common design practice is to use a nominal edge distance of $2D$ from the fastener hole centerline, where D is the fastener diameter. The minimum edge distance should not be less than $1.5D$. The nominal distance between fasteners is $4D$, but the thickness of the materials being joined

can be a significant factor. For thin materials, buckling between fasteners can be a ...

A practical starting point for all threaded fastener tightening analysis is to use the basic elastic torque-tension equation, $T = K \cdot D \cdot F$, to estimate the relative magnitudes of torque and clamp force. Starting with this equation, which defines a linear relationship between torque and tension, you can develop models for the tightening process.
