Conservation Drones

Mapping and Monitoring Biodiversity *Oxford University Press*
Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up-to-date data on the distribution and density of

species, as well as the threats to their habitats, in their ongoing attempts to conserve and monitor biodiversity. Conservation drones are low-cost, autonomous, and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping, and monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging technologies for practical conservation.

Transdisciplinary Engineering Methods for Social Innovation of Industry 4.0

Proceedings of the 25th ISPE Inc. International Conference on Transdisciplinary Engineering, July 3 - 6, 2018 *IOS Press*

The concept of concurrent engineering (CE) was first developed in the 1980s. Now often referred to as transdisciplinary engineering, it is based on the idea that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). The main goal of CE is to increase the efficiency and effectiveness of the PCP and reduce errors in later phases, as well as incorporating considerations - including environmental

implications – for the full lifecycle of the product. It has become a substantive methodology in many industries, and has also been adopted in the development of new services and service support. This book presents the proceedings of the 25th ISPE Inc. International Conference on Transdisciplinary Engineering, held in Modena, Italy, in July 2018. This international conference attracts researchers, industry experts, students, and government representatives interested in recent transdisciplinary engineering research, advancements and applications. The book contains 120 peer-reviewed papers, selected from 259 submissions from all continents of the world, ranging from the theoretical and conceptual to papers addressing industrial best practice, and is divided into 11 sections reflecting the themes addressed in the conference program and addressing topics as diverse as industry 4.0 and smart manufacturing; human-centered design; modeling, simulation and virtual design; and knowledge and data management among others. With an overview of the latest research results, product creation processes and related methodologies, this book will be of interest to researchers, design practitioners and educators alike.

Sustainable Surfing *Taylor & Francis*

Whilst being an ambiguous and contested concept, sustainability has become one of the twenty-first century's most pervasive ideas, as humanity's increasing impact on the environment, as well as increasing social and economic inequalities, have local and global consequences. Surfing is a globally recognised cultural phenomenon whose unique connection with nature and rapid expansion into a multibillion pound industry offers exciting synergies for exploring various dimensions of sustainability. This book is the first to bring together the world's foremost experts on the themes of sustainability and surfing. Drawing upon cutting edge theory and research, this book offers multidisciplinary perspectives and methodological approaches on the social, environmental and economic components of sustainable surfing. Contributions provide unique discussions that bridge the gap between theory and practice, exploring topics such as sustainable surf tourism, surf-econometrics, surf activism, surfing governance, the surfing industry, and technological advancements. Each chapter produces in-depth insights to provide foundational insights of the relationship between sustainability and surfing. This book will appeal to multiple audiences in different disciplines and sectors. Practitioners will benefit from the insights presented in this volume, while both undergraduate and postgraduate students will find this volume an invaluable companion, including those working in geography, environmental studies, sport sciences, and leisure and tourism

studies.

Design Thinking Research

Making Design Thinking Foundational *Springer*

This book summarizes the results of Design Thinking Research carried out at Stanford University in Palo Alto, California, USA and Hasso Plattner Institute in Potsdam, Germany. The authors offer readers a closer look at Design Thinking with its processes of innovations and methods. The contents of the articles range from how to design ideas, methods and technologies via creativity experiments and wicked problem solutions, to creative collaboration in the real world and the connectivity of designers and engineers. But the topics go beyond this in their detailed exploration of design thinking and its use in IT systems engineering fields and even from a management perspective. The authors show how these methods and strategies work in companies, introduce new technologies and their functions and demonstrate how Design Thinking can influence as diverse a topic area as marriage. Furthermore, we see how special design thinking use functions in solving wicked problems in complex fields. Thinking and creating innovations are basically and inherently human – so is Design Thinking. Due to this, Design Thinking is not only a factual matter or a result of special courses nor of being gifted or trained: it's a way of dealing with our environment and improving techniques, technologies and life.

Entrepreneurial Marketing

An Effectual Approach *Routledge*

How do you sell an innovative product to a market that does not yet exist? Entrepreneurial businesses often create products and services based on radically new technology that have the power to change the marketplace. Existing market research data will be largely irrelevant in these cases, making sales and marketing of innovative new products especially challenging to entrepreneurs. Entrepreneurial Marketing focuses on this challenge. Classic core marketing concepts, such as segmentation, positioning and the marketing mix undergo an 'extreme makeover' in the context of innovative products hitting the market. Edwin J. Nijssen stresses principles of affordable loss, experimentation and adjustment for emerging opportunities, as well as cooperation with first customers. Containing many marketing examples of successful and cutting edge innovations (including links to websites and videos on the Internet), useful lists of key issues and instructions on how to make a one-page marketing plan, Entrepreneurial Marketing: An Effectual Approach provides a vital guide to successfully developing customer demand and a market for innovative new products. This second edition has been thoroughly expanded with: a one-page marketing plan which now focuses on the three entrepreneurial challenges that can be easily adapted; coverage of the customer development process; and updated references and new examples. This book provides students and entrepreneurs with the fundamental tools to succeed in marketing.
