Timber Framing

Timber framing has a long history throughout the world as a traditional building practice. With timber framing, heavy, large timbers frame the structure instead of more slender dimensional lumber (for example, 2 x 6's.). One of the most distinctive characteristics of a timber frame is the unique joinery that holds the timbers together.

Brunswick Timber Frames, Inc.

Framing, in construction, is the fitting together of pieces to give a structure support and shape. Framing materials are usually wood, engineered wood, or structural steel. The alternative to framed construction is generally called mass wall construction, where horizontal layers of stacked materials such as log building, masonry, rammed earth, adobe, etc. are used without framing.

Framing (construction) - Wikipedia

Timber framing is a distinctive style of building construction in which heavy timbers frame the structure instead of more slender dimensional lumber (for example, 2 x 6-in.). Timber framing was a building practice used throughout the world until roughly 1900 when the demand for cheap, fast housing brought dimensional lumber to the construction forefront.
