Rna Silencing Methods And Protocols

In RNA Silencing: Methods and Protocols, many of the most notable and distinguished researchers in the field describe in step-by-step detail their best methods for the design, preparation, and use of RNAs to reduce gene expression in cells and organisms. The techniques range widely and include methods

addressing the biochemical aspects of the silencing machinery, RNA silencing in non-mammalian organisms, and the in vivo delivery of siRNAs and silencing vectors.

The past decade has witnessed a true revolution in our understanding of how RNA molecules can reduce or silence gene expression, a process that holds great promise in basic research and for antiviral and anticancer applications. In *RNA Silencing: Methods and Protocols*, many of the most notable and distinguished researchers in the field describe in step-by-step detail their best methods for the design, preparation, and use of RNAs to reduce gene expression in cells and organisms.

This month, Silence launches a new series on methods and protocols to study silencing pathways and analyze nucleic acids and proteins. The first article in this series, from Xuemei Chen and coworkers, reports the development of a novel reporter system to enable forward genetic screens for transcriptional silencing in plants. This article exemplifies the type of methods we plan to highlight: robust, quantitative tools and protocols that make it easier to study silencing phenomena in ...

About this book. Recent insight into the

transcripts generated from the mammalian genome (i.e. the transcriptome) has revealed that transcription is a far more complex phenomenon than previously thought. In RNA: Methods and Protocols, expert researchers provide the procedures and methods used to describe the structure of messenger RNAs and non-coding RNAs that are transcribed by RNA polymerase II as the immediate gene products in mammalian cells.

Alternate Modes of Gene Silencing by RNA Interference. Small Interfering RNAs (siRNAs) are short double-stranded RNA molecules that can target and degrade complementary mRNAs via a cellular

process termed RNA interference (RNAi). Alternate methods for generating siRNA are: (i) vector based in vivo expression, (ii) chemical synthesis, (iii) in vitro transcription (IVT), (iv) RNase III mediated hydrolysis and (v) PCR based siRNA expression cassettes.
