This attenuator design has the following features/characteristics : Compact and simple circuit: just 6 tiny relays implement a 64-step logarithmic stereo attenuator. The 64 steps of 1.0dB together span a 63dB audio attenuation range. By avoiding any active electronics, a very clean and open sound is maintained. An IR receiver allows remote control.

The relay-switched attenuator volume control. Background. For many years I've been thinking about the best way to control the volume in a

remote-controlled preamplifier with the minimum loss of transparency, and I decided long ago that the a relay-switched attenuator was the ultimate solution. In fact I put together a couple of PCBs with 30-step (2dB) attenuators nearly fifteen years ago ...

Benchmark has introduced a new analog-to-analog volume control circuit that features a 256-step relay-controlled attenuator and a 16-step relay-controlled boost amplifier. The volume control has a +15 dB to -122 dB range in 0.5 dB steps and is a key component in the HPA4 Headphone / Line

Amplifier. Our goal was to produce an analog-to-analog volume control with the highest achievable transparency.

A ladder attenuator's job is to provide various levels of voltage attenuation while keeping either its input or output resistance constant. The number of required steps of attenuation determines the number of relays one will need. With one relay you will have 2 to the power of 1 steps, so 2.

However, relay attenuators do have a couple of advantages, among which that they can be built for a reasonable cost. A stepped attenuator also has very good channel matching, but

whereas even the expensive DACT only gets you 24 steps, typically with 2dB between them, 128 or even 256 steps of 0.5dB each are quite easily achieved with relays.

Joshua Tree is a logarithmic stepped attenuator with 128 steps + mute. It utilizes eight Omron G6K relays and can be setup for any degree of attenuation per step and any total amount of attenuation. The kit uses Vishay/Dale 1% CMF resistors, providing 0dB to -63.5dB of attenuation (+ mute) in .5dB steps.

My point is, this is a very good stepped attenuator indeed, it beats the DACT CT2 by quite some margin, which I've been using for some time (2 years). And its fully remote with 64 steps on the gain and 4 inputs all via little relays which are quite audible.

It is a true attenuator, and it does not add any distortion to the audio signal. This attenuator design inherits important concepts of my earlier RelaiXed preamplifier designs: It uses tiny relays for volume control and input selection. The volume control provides 64 steps with approximately 1dB

step size.
