Basic Gas Metal Arc Welding

Gas metal arc welding (GMAW) is a high-

speed, economical process that is sometimes referred to as metal inert gas (MIG) welding (Figure 1). In this process, an arc is struck between the base metal and a continuously supplied consumable electrode, which provides filler metal for the weld (2). The electrode is bare, containing no coating or core. The shielding, to protect the molten metal from reacting with constituents of the atmosphere, is supplied by an external gas, usually containing one ...

Gas Metal Arc Welding Basic
Gas metal arc welding (GMAW),

sometimes referred to by its subtypes metal inert gas (MIG) welding or metal active gas (MAG) welding, is a welding process in which an electric arc forms between a consumable MIG wire electrode and the workpiece metal(s), which heats the workpiece metal(s), causing them to melt and join. Along with the wire electrode, a shielding gas feeds through the welding gun ...

Gas metal arc welding - Wikipedia

Gas Metal Arc Welding (GMAW), by definition, is an arc welding process which produces the coalescence of metals by heating them with an arc between a continuously fed filler metal electrode and the work. The process uses shielding from an externally supplied gas to protect the molten weld

pool.

There are many different styles and types of welders, but for our purposes we will be focusing on 110volt MIG/GMAW (Metal Inert Gas or Gas Metal

Arc Welding). This is most commonly referred to as a "wire-feed" welder.

Basic Welding -- : 8 Steps - Instructables

Arc welding is one of several fusion processes for joining metals. By applying intense heat, metal at the joint between two parts is melted and caused to intermix - directly, or more commonly, with an intermediate molten filler metal. Upon cooling and solidification, a metallurgical bond is created.
