(162) Illustration 16. I The electronegativities of hydrogen and bromine are 2.1 and 2.8 respectively. The difference is 0.7, so we predict an electric dipole moment of about 0.7 D for HBr. The experimental value is 0.80 D. 3 Be careful with this convention: for historical reasons the opposite convention is still widely adopted.

University of Wisconsin-Eau Claire

T CHEM 162 General Chemistry III (6) NW Explores fundamental concepts about equilibrium, acid-base titrations, electrochemistry, colligative properties and bond theory. Third in a series of general chemistry courses for science majors. Includes required lab.

CHEMISTRY - TACOMA - University of Washington

The seventh edition of General Chemistry continues the tradition of presenting only the material that is essential for a one-year general chemistry course. It strikes a balance between theory and application by incorporating real-world examples; helping students visualize the three-dimensional atomic and molecular structures that are the basis of chemical activity; and developing problem ...
