The surfaces that kill bacteria and viruses - BBC Future

The germ theory of disease is the currently accepted scientific theory for many diseases. It states that microorganisms known as pathogens or "germs" can lead to disease. These small organisms, too small to see without magnification, invade humans, other animals, and other living hosts. Their growth and reproduction within their hosts can cause disease.

Germ theory of disease - Wikipedia

Rabies is a deadly disease that can be transmitted to humans through the bites of infected dogs that usually have the virus in their saliva. Middle East Respiratory Syndrome (MERS) is a new virus that appeared in Saudi Arabia a few years ago. It is closely related to SARS and is spread from bats to camels and, finally, to humans.
