What does this tell you? If grains are the same size this tells you that the sediment was sorted out during longer transportation (perhaps moved a long

distance by a river or for a long time by the sea. If grains are of different sizes the sediment was probably deposited close to its source or deposited quickly (e.g. by a flood or from meltwater).

Particle size, shape and sorting: what grains can tell us

By Deborah J. Rumsey . Standard deviation can be difficult to interpret as a single number on its own. Basically, a small standard deviation means that the values in a statistical data set are close to the mean of the data set, on average, and a large standard deviation means that the values in the data set are farther away from the mean, on average.

How to Interpret
