Algebra - Solutions and Solution Sets

Sets. A set is a well-defined collection of distinct objects. The

individual objects in a set are called the members or elements of the set. Some notations for sets are: $A = \{1, 2, 3\} = \{\text{integers greater than 0 and less than 4}\} = \{x: x \text{ is an integer and } 0 < x < 4\}$ We also have the empty set denoted by $\{\}$ or $\emptyset$.

The set containing all the solutions of an equation is called the solution set for that equation. If an equation has no solutions, we write $\emptyset$ for the solution set. $\emptyset$ means the null set (or empty set). [$>>>$] Solution set. The solution set for the equations $x - y = -1$ and $3x + y = 9$ is the single point $(2, 3)$.

I believe it should be "the solution set = $x \in A$ " Thanks for the responses. samkoff has the right idea. $x \in A$ doesn't mean a particular solution, it is still a set, I just unrigorously used the plus operator. A good way to demonstrate union is incorrect is as follows. Assume there is a UNIQUE NON-ZERO SOLUTION.

As $\emptyset$ is the subset of every set $\therefore \emptyset \subseteq A \cap A \subset \dots$ (i) We have to show that $A \cap A \subset \emptyset$ Let $x \in A \cap A \Rightarrow x \in A$ and $x \in A \Rightarrow x \in A$ and $x \notin A \Rightarrow x \in \emptyset \therefore A \cap A \subset \emptyset \dots$ (ii) From (i) and (ii), we get $A \cap A = \emptyset$. Because a solution to a linear system must satisfy all of the equations, the solution set is the intersection of these lines, and is hence either a line, a single point, or the empty set. For three variables, each linear equation determines a plane in three-dimensional space, and the solution set is the intersection of these planes. Thus the solution set may be a plane, a line, a single point, or the empty set.
