The obvious answer is a circle of radius a , centered at the origin: $x^2 + y^2 = a^2$. However, it is not the only circle that fits. The only constraints are that $(a,0)$ and $(0,a)$ are points on the circle. The axes could be tangents to the circle,

which means the circle is in the first quadrant, tucked into the corner: $(x-a)^2 + (y-a)^2 = a^2$

A circle is an important shape in the field of geometry. Let's look at the definition of a circle and its parts. We will also examine the relationship between the circle and the plane. A circle is a shape with all points the same distance from its center. A circle is named by its center. Thus, the circle to the right is called circle A since its center is at point A.
