The reinterpretation of dreams: An evolutionary hypothesis ...

The threat simulation theory of dreaming (TST) () states that dream consciousness is essentially an ancient biological defence mechanism, evolutionarily selected for its capacity to repeatedly simulate threatening events. Threat simulation during dreaming

rehearses the cognitive mechanisms required for efficient threat perception and threat avoidance, leading to increased probability of reproductive success during human evolution.

The threat simulation theory of the evolutionary function ...

While a theory by Revonsuo (2000) proposes that dreams allow for threat rehearsal and therefore provide an evolutionary advantage, the goal of this paper is to extend this argument by commenting on other fitness-enhancing aspects of dreams. Rather than a simple threat rehearsal mechanism, it is argued that dreams reflect a more general

virtual rehearsal mechanism that is likely to play an important role in the development of human cognitive capacities.

The Role of Dreams in the Evolution of the Human Mind ...

Dreams are thought to provide an evolutionary advantage because of their capacity to repeatedly simulate potential threatening events. This process enhances the neurocognitive mechanisms required for efficient threat perception and avoidance.

Dreams and Dreaming | Introduction to Psychology

Breger also proposes a psychological function for dreams, a function

that relates both the developmental and evolutionary aspects of dreaming to the psychological reasoning behind why dreams occur. Breger (1967) suggests that REM sleep sets the stage for the function of dreams later in life, which is to help 'integrate recent perceived input into existing internal structures' (p.4).
