The Divine Proportion A Study

Using simple mathematical formulas, most as basic as Pythagoras's theorem and requiring only a very limited knowledge of mathematics, Professor Huntley explores the fascinating relationship between geometry and aesthetics. Poetry, patterns like Pascal's triangle, philosophy, psychology, music, and dozens of simple mathematical figures are enlisted to show that the "divine proportion" or "golden ratio" is a feature of geometry and analysis which awakes

answering echoes in the human psyche.

Euclid defines the "extreme and mean ratio," or "Divine Proportion," as the following relationship:

When a line is divided such that the smaller section of the line (BC) is related to the larger section of the line (AC) in the same ratio as the larger section is related to the whole line (AC), then the line is divided in the Divine Proportion.

In mathematics, two quantities are in the golden ratio if their ratio is the same as the ratio of their sum to the larger of the two quantities. The figure on the right illustrates

the geometric relationship. Expressed algebraically, for quantities a and b with $a > b > 0$, $+ =$, where the Greek letter phi (or ϕ) represents the golden ratio. It is an irrational number that is a solution to the ...
