Early in 2010 ConocoPhillips teamed up with CGGVeritas for all main elements of the seismic delivery chain for the Ekofisk Life of Field Seismic project. This paper shows how the key elements of the project from acquisition to QC to processing and geosciences are linked up and how additional value can be created through seamless integration of all project elements.

Three of the providers offered "conventional" systems incorporating either traditional geophones or MEMS (micro-electro-mechanical-systems) accelerometers, with subsea analog to digital conversion and data transmission of ...

GEO ExPro - Monitoring of the Ekofisk Field

Known as life of field seismic (LoFS), this installation gives accurate measurements of reservoir changes over time in order to determine where more oil remains to be recovered. The network connected with fibreoptic cables which allowed the data acquired to be sent directly to the ConocoPhillips offices in Tananger for quality control and processing.

Ekofisk is an oil field in block 2/4 of the Norwegian sector of the North Sea about 320 km southwest of Stavanger. Discovered in 1969 by Phillips Petroleum Company, it remains one of the most important oil fields in the North Sea. This was the first discovery of oil after the drilling of over 200 exploration wells in the North Sea "triggered" by the Groningen gas field discovery. In 1971, Phillips started producing directly to tankers from four subsea wells. Oil production is planned to continue

[5] The Ekofisk field is located within the Central Graben in the southern North Sea (Figures 1 and 2). The Central Graben is a NW-SE fault-bounded trough that was initiated during a major rifting period in the Late Triassic, with crustal extension continuing through Jurassic times [Pekot and Gersib, 1987]. The Ekofisk reservoir, which lies about 3000 m below the seafloor, is a salt-induced, roughly elliptical anticline structure that is 11.2 km long (N-S) and 5.4 km wide (E-W).

The epicentre of the quake was about 18 kilometres north-west of the Ekofisk Complex, and it registered as 4.0 on the Richter scale. [1] A duration of roughly one minute was long for a tremor in

this part of the world. It ranked as the second medium-sized quake (up to 4.0) on Ekofisk, after one in 1998.
