The final volume in a series reviewing published literature and documenting conceptualization and construction of

health status measures used in RAND's Health Insurance Study (HIS). This report summarizes the progress made in measuring adult health status for the HIS, as detailed in the preceding seven volumes.

Conceptualization and Measurement of Health for Adults in ...

The HPQ contains six summated ratings scales reflecting perceptions of current, past, and future health, resistance-susceptibility, sickness orientation, and health worry/concern. These measures appear sufficiently reliable and valid for testing hypotheses on effects of differences in coinsurance and deductibles and fee-for-service compared with group practice and of differences in use of medical care

services on health status in general populations.

Conceptualization and Measurement of Health for Adults in ...

Fourth in a series on Health Insurance Study (HIS) measures, this volume reviews published literature and documents the conceptualization and construction of social health measures. The literature review indicated that social health had been measured in terms of quantity and quality of interpersonal interactions and extent of community participation.

Conceptualization and Measurement of Health for Adults in ...

Abstract. The meaning of health is complex and subject to change. In this

article, four conceptual models of health are presented to summarize the current meanings for health. The medical model is the most widely used definition in the United States, but the World Health Organization model has gained in popularity during the past several decades. In addition, there are other newer models—the wellness model and the environmental model—that are adding new meanings to the definition of health.

The Conceptualization of Health - James S. Larson, 1999

The construct of Health Care Empowerment (HCE) emerged out of a need for a broader conceptualization of engagement in medical treatment that encompasses multiple facets of

participation in health care . Specifically, HCE is defined as the process and state of being 1) engaged, 2) informed, 3) collaborative, 4) committed to one's health care and 5) tolerant or resilient to uncertainties in treatment outcomes.

No consensus exists in the health care disciplines about what quality of life is or how it should be measured. This paper presents historical and conceptual arguments in favour of a particular definition of quality of life, and distinguishes between quality of life and concepts often confused with it in the literature: symptoms, mood, functional status, and general health status.
