In engineering, electromechanics

combines processes and procedures drawn from electrical engineering and mechanical engineering.

Electromechanics focuses on the interaction of electrical and mechanical systems as a whole and how the two systems interact with each other. This process is especially prominent in systems such as those of DC or AC rotating electrical machines which can be designed and operated to generate power from a mechanical process or used to power a mechanical effect. □ The power system is a dynamic one, it is described by a set of vector of differential equations □ The time scales in the response of this equation range from milliseconds, in the case of electromagnetic transients, to a few seconds in the control of frequency, and a few hours in the case of boiler dynamics. □ Therefore, we analyze such equations for time-domain response, steady-state sinusoidal behavior, equilibrium points, stability, etc.
