This process of integration method optimization was, for a long time, considered essential for trustworthy reproducible peak integration. Critically, in an age where peak integration and peak areas were not part of the stored record, it was the only way that the result could be regenerated by the same analyst or a different analyst. Manually placing the peak starts and ends was considered dangerous because a second person would be unlikely to ever place the peak starts and ends in the exact ...

In early 2016, more than 70% of injections had some form of manual integration. We achieved manual integration rates below 25% by the time the MHRA audited us in June 2017 and then reduced further to <15% in October 2018, with our formulated products group routinely operating at 0%. The report template we developed with Thermo Fisher Scientific also shows the manual integration levels per individual

analyst.
