An Efficient Approach to Power System Uncertainty Analysis With High-Dimensional Dependencies. Abstract: The integration of high penetration of renewable energy brings greater uncertainties for the operation of future power systems due to its intermittency and lack of predictability. The uncertainties brought by wide scale renewables might have dependencies with each other because their outputs are mainly influenced by weather.

This work aims at the uncertainty quantification for high-dimensional problems. Assuming the performance of an engineering system is modeled by a limit state function (LSF) $G(x)$, where $x \in \mathbb{R}^n$ denotes the high-dimensional system input, and each input variable is considered as an independent random variable. Due to the randomness of the high-dimensional

Measurement Uncertainty . easy to evaluate (see Sections 19.3.5 and 19.5.2). However, the counting uncertainty is only one component of the total measurement uncertainty. Over the years it has been recommended repeatedly that laboratories perform good evaluations of the total uncertainty of each measure-ment.
