Survey Responses An Evaluation Of

Responses can be as simple as a choice between "Yes" or "No" or as complex as choosing an answer among seven response options. The response options for each question in your survey may include a dichotomous, a three-point, a five-point, a seven-point or a semantic differential scale. Each of these response scales has its own advantages and disadvantages, but the rule of thumb is that the best response scale to use is the one which can be easily understood by respondents and ...

A survey's response rate has always been viewed as an important indicator of survey quality. However, recent studies have shown that surveys with lower response rates (near 20%) had more accurate measurements compared to surveys with higher response rates (near 60 or 70%). Nevertheless, in spite of these recent research studies, a higher response rate is preferable because the missing data is not random.
