model the real-world data that is being stored, and how naturally one can find and change data stored in the database. The Network model commonly represents data and relationships through diagrams containing boxes and arrows. Each box represents a record type and each arrow represents a relationship type. A record type will

Network and Relational Data Modeling - Raima

A network model is a database model that is designed as a flexible approach to representing objects and their relationships. A unique feature of the network model is its schema, which is viewed as a graph where relationship types are arcs and object types are

nodes. Unlike other database models, the network model's schema is not confined to be a lattice or hierarchy; the hierarchical tree is replaced by a graph, which allows for more basic connections with the nodes.

What is the Network Model? - Definition from Techopedia

Open a Network Specification entity in the Network Specification editor. See "Creating New Specifications" for information about creating new Network specifications. Click the Network Properties tab. In the Entity Type field, select a network type. In the Technology field, click Select. The Select Technology dialog box appears.
