In airplanes, drag is caused by the air surrounding the airplane. The field which studies the interaction between the air and the moving object is called aerodynamics. The study of aerodynamics is important when designing airplanes and other objects moving through the wind. It is even used when designing trucks and trains.

Depending on the aerodynamic design, paper airplanes can fly fairly far and glide through the air with ease. Physics can come in handy when designing the craft, as various forces can easily affect the distance and length of the flight. The current Guinness Book of World Record for the furthest paper aircraft flight is 69.14 meters.

Aerodynamics is the
branch of physics that

studies the characteristics of motion of air and the interaction of any moving object with air. An airplane is an object that makes use of the principles of aerodynamics to fly tons of weight across thousand miles against the force of gravity.

Understanding Paper Airplane Aerodynamics ... - Science Struck

This activity shows how a paper aeroplane, glider or helicopter falls to the ground much more slowly and gracefully than a scrunched-up piece of paper. It's all thanks to the forces generated by air pressing on, and moving over, the surface of the paper.

Build a paper airplane (any kind) and place a paper clip on the nose. Make a few flights to determine the best amount of up elevator needed. Now move the paper clip back an inch or two, and repeat. The amount of up elevator needed is reduced, and the plane becomes more sensitive to elevator adjustments.
