Clinical Diagnosis And Treatment Of

Clinical diagnosis is the process of using assessment data to determine if the pattern of symptoms the person presents with is consistent with the diagnostic criteria for a specific mental disorder outlined in an established classification system such as the DSM-5 or ICD-10 (both will be described shortly). Any diagnosis should have clinical utility, meaning it aids the mental health professional in determining prognosis, the treatment plan, and possible outcomes of treatment (APA, 2013).

Sciatica is commonly used to describe radiating leg pain. It is caused by inflammation or compression of the lumbosacral nerve roots (L4-S1) forming the sciatic nerve.¹ Sciatica can cause severe discomfort and functional limitation. Recently updated clinical guidelines in Denmark, the US, and the UK highlight the role of conservative treatment for sciatica.^{2 3 4} In this Clinical Update, we ...

Diagnosis and treatment of sciatica | The BMJ

Diagnosis is made with thorough history-taking and physical examination, and the condition is characterised by variable airflow obstruction and airway hyper-responsiveness. Understanding the severity of the disease is important, and treatment is aimed at symptom control and the prevention of future exacerbations.

Asthma: Diagnosis and Treatment - European Medical Journal

Clinical diagnosis A diagnosis made on the basis of medical signs and reported symptoms, rather than diagnostic tests Laboratory diagnosis A diagnosis based significantly on laboratory reports or test results, rather than the physical examination of the patient. For instance, a proper diagnosis of infectious diseases usually requires both an examination of signs and symptoms, as well as laboratory test results and characteristics of the pathogen involved.
