Machine Learning For Email Spam

Email spam, are also called as junk emails, are unsolicited messages sent in bulk by email (spamming). In this Data Science Project I will show you how to detect email spam using Machine Learning technique called Natural Language Processing and Python. So this program will detect if an email is spam (1) or not (0) Import the libraries :

Email spam Detection with Machine Learning

Abstract. The upsurge in the volume of unwanted emails called spam has created an intense need for the development of more dependable and robust antispam filters. Machine learning methods of recent are being used to successfully detect and filter spam emails. We present a systematic review of some of the popular machine learning based email spam filtering approaches.
