Biodegradable Polymers As Drug Delivery

Many biodegradable polymers have been successfully fabricated into a number of devices for drug delivery including microspheres, microcapsules and nanoparticles [21,22]. There are several ways that polymers can be utilised in drug delivery, including diffusion controlled systems, swelling controlled devices and particulate systems such as polymer-drug conjugates.

Biodegradable Polymers and their Role in Drug Delivery ...

A biodegradable polymer is a polymer in which the degradation results from the action of naturally occurring microorganisms such as bacteria, algae or fungi. Polymers were first developed in the search of biodegradable structures and their applications were found to be useful and successful for long term drug delivery.

Biodegradable Polymers as Drug Delivery Systems

Biodegradable polymers are of great interest in the field of drug delivery and nanomedicine. The great benefit of a biodegradable drug delivery system is the ability of the drug carrier to target the release of its payload to a specific site in the body and then degrade into nontoxic materials that are then eliminated from the body via natural metabolic pathways .
