Physics Problems: Dynamics

These questions go beyond the typical problems you can expect to find in a physics textbook.

Some of these physics questions make use of different concepts, so (for the most part) there is no single formula or set of equations that you can use to solve them.

Physics Questions - Real World Physics Problems

Remember, the physics part of the problem is figuring out what you are solving for, drawing the diagram, and remembering the formulae. The rest is just use of algebra, trigonometry, and/or calculus, depending on the difficulty of your course. It is said that the material is like a pyramid; the new information is built upon the old.

How to Solve Any Physics Problem: 10 Steps (with Pictures)

Using physics, you can calculate the orbital speed and radius of an object as it revolves around another one. For example, given the orbital speed of a satellite around Earth, you can calculate the satellite's orbital radius. Here are some practice questions that you can try. Practice questions A satellite orbits Earth at an altitude [...]

Physics problems: kinematics. Part 11 Problem 101. A particle is moving eastwards with a velocity 5 m/s, changes its direction northwards in 10 seconds and moves with the same magnitude of velocity. Find the average acceleration of the

particle. Solution . Problem 102.

Physics Problems: kinematics

In physics terms, what is speed? It's the same as the conventional idea of speed: Speed is distance divided by time, which is what a speedometer measures. The related term velocity refers to a speed with an associated direction. To measure velocity, you might use a speedometer in combination with a compass. Sometimes, you are [...]

A “physics description” of a problem translates the given information and a very literal picture into an idealized diagram and defines variables that can be manipulated to calculate desired quantities. In a sense, you are translating the literal situation into an idealized situation

where you can then apply the laws the physics.
