A differential equation is an equation for a function containing derivatives of that function. For example, the differential equations for an RLC circuit, a pendulum, and a diffusing dye are given by $L \frac{d^2 q}{dt^2} + R \frac{dq}{dt} + \frac{1}{C} q = E \cos \omega t$, (RLC circuit equation) $m \frac{d^2 \theta}{dt^2} + c \frac{d\theta}{dt}$

Book: Ordinary Differential Equations (Wiggins ...

In mathematics, a differential equation is an equation that relates one or more functions and their derivatives. In applications, the functions generally represent physical quantities, the derivatives represent their rates of change, and the differential equation defines a relationship between the two. Such relations are common; therefore, differential equations play a prominent role in many disciplines including engineering, physics, economics, and biology. Mainly the study of differential equations
