Biro's Turbulence and Flow in Film is a book that demands our own precious time and understanding as it is a finely wrought,

informative and poetic contribution to a very intricate and extraordinarily important topic: how enchanting cinema storytelling depends on the "Proustian" current of turbulence and flow that meanders in so many complicated ways through cinema itself.

Turbulence and Flow in Film describes how pace and rhythm create meaning and how film gains its fullness through the flow of images and the speed or slowness of the dramatic action. It demonstrates that the quick or restrained breathing of the sequences is not a secondary element but rather provides the spirit and ambiance of the work.

In fluid dynamics, turbulence or turbulent flow is fluid motion characterized by chaotic changes in pressure and flow velocity. It is in contrast to a laminar flow, which occurs when a fluid flows in parallel layers, with no disruption between those layers.

Turbulence is commonly observed in everyday phenomena such as surf, fast flowing rivers, billowing storm clouds, or smoke from a chimney, and most fluid flows occurring in nature or created in engineering

applications are
