The Phytochemical Landscape Linking Trophic

The phytochemical landscape, that complex spatial and temporal combination of elemental nutrients, toxins, and recalcitrant molecules, is the nexus that links trophic interactions with nutrient dynamics in ecosystems. Over ecological and evolutionary timescales, the chemistry of primary producers is both a cause and a consequence of variation in trophic interactions, including herbivory, predation, parasitism, and disease.

The Phytochemical Landscape: Linking Trophic Interactions ...

Links between trophic interactions and nutrient dynamics are mediated by variation in the chemical traits of primary producers on the phytochemical landscape. Trophic interactions such as herbivory and predation vary with the chemical traits of autotrophs (arrow 1).

At the same time, such interactions feed back to influence spatial and temporal variation in the chemistry of plants. In *The Phytochemical Landscape*, Mark Hunter provides a novel approach to linking the trophic interactions of organisms with the cycling of nutrients in ecosystems. Hunter introduces the concept of the "phytochemical landscape" – the shifting spatial and temporal mosaic of plant chemistry that serves as the nexus between trophic interactions and nutrient dynamics.
