Abstract. A simple thin-layer element is developed and used in a finite element procedure for simulation of various modes of deformanon in dynamic soil-structure interaction. The constitutive behavior of the interface is defined by decomposing it into its normal and shear components. The soil is modeled as an elastic-plastic hardening material.

Abstract. A dynamic beam on a nonlinear Winkler foundation (or “dynamic p - y ”) analysis method for analyzing seismic soil-pile-structure interaction was evaluated against the results of a series of dynamic centrifuge model tests. The centrifuge tests included two different single-pile-supported structures subjected to nine different earthquake events with peak accelerations ranging from 0.02 to 0.7 g.

Abstract. Usually in the seismic design of ordinary building, soil structure interaction is neglected and the dynamic response of the structure is evaluated under the assumption of a fixed based response. However during seismic loading the soil undergoes deformations which are imposed to the foundation, the question naturally arises of knowing if the motion in the vicinity of the structure is altered by the presence of the structure and how the structure response is modified by the ...

The seismic loading may be either dynamic due to the inertial forces developed on the mass of the structure (s) and/or quasi-static due to the permanent ground deformations (PGDs) caused by various earthquake-related geohazards, such as active-fault ruptures, slope instabilities, and soil liquefaction phenomena.

Abstract. In the last thirty years or so, the dynamic soil-structure interaction (DSSI) has undertaken giant leaps in terms of application. From being perceived initially as a utopian exercise in the realms of theoretical physics (understood by few), in the early 1960s it has stormed into the hard nosed

arena of professional design and has possibly cut itself a permanent niche, rather than being perceived as just a passing fad.

Dynamic Soil-Structure Interaction in Earthquake Analysis ...

One of the main challenges is the difficulty of direct soil-structure observations under full- or small-scale dynamic conditions. But the development of Transparent Synthetic Soil in geotechnical physical modelling is now making visualisation of physical soil models and non-intrusive, real-time measuring of internal soil displacements/strains easier, through laser-aided imaging and Particle Image Velocimetry.

Transparent Soil Modelling of Soil-Structure Interaction ...

The beam on nonlinear Winkler foundation (BNWF) model is widely used in soil-structure interaction (SSI) analysis owing to its relative simplicity. This paper focuses on the development of a versatile dynamic BNWF model for the analysis of shallow and deep foundations. The model is developed as a stand-alone module to be incorporated in commercial nonlinear structural analysis software.
