Architecture of the Hyperledger Blockchain Fabric

Overview. A blockchain is best understood in the model of state-machine replication [8], where a service maintains some state and clients invoke operations that transform the state and generate outputs. A blockchain emulates a "trusted" computing service through a distributed protocol, run by nodes connected over the Internet. The service represents or creates an asset, in which all nodes ...

Figure 1: The traditional architecture for building blockchains and resilient replicated services, where transactions are ordered first and executed later. Hyperledger Fabric was devised to use a different architecture that supports scalability and flexible trust assumptions.

IBM Research: Behind the architecture of Hyperledger Fabric

The framework of Hyperledger Sawtooth is being developed by Intel. It is a blockchain framework which focuses on agility. The framework offers basic functions such as communication between network nodes and storing data on the architecture and the blockchain for plugging consensus algorithms and smart contracts.

What is Hyperledger Fabric?

Modular: The Hyperledger architecture working group defines functional modules to address common issues, including policy, consensus, cryptography, identity, and smart contracts. This modular approach allows different developer communities to work independently, while developing extensible frameworks using reusable common building blocks.

Survey Of Hyperledger Design Philosophy And Framework ...

More specifically, Hyperledger Fabric is a permissioned blockchain network. This means that only permitted users can query (access to information) or invoke (create a new transaction) a transaction on a granted channel. Hyperledger Fabric uses an X.509 standard certificate to represent permissions, roles, and attributes to each user.

Demystifying Hyperledger Fabric (1/3): Fabric Architecture ...

For instance, Hyperledger Fabric architecture is actually a collaboration between Hyperledger and IBM. Anyhow, just like all other platforms in the market, Fabric comes with its own share of protocols, standards, consensus, APIs, ledger systems, smart contracts and so on. But you will see that this platform is a bit different as well.

Hyperledger Sawtooth Vs. Fabric: How Are They Different?

The architecture separates trust assumptions for chaincodes (blockchain applications) from trust assumptions for ordering. In other words, the ordering service may be provided by one set of nodes (orderers) and tolerate some of them to fail or misbehave, and the endorsers may be different for each chaincode.
