Stirling Engine Designs

Since a Stirling engine is air tight, during the heating phase the air pressure inside increases, and during the cooling phase the pressure decreases. A displacer connected to the crankshaft moves the internal air from hot side to cold side of a cylinder. The change in pressure drives a power piston, which is also connected to the crankshaft.

Design Criteria for Stirling Cycle Engine : 7 Steps (with ...

Reverend Robert Stirling of Scotland invented the Stirling engine in 1816. During that period many of the early high-pressure steam boilers exploded because of poor materials and faulty methods of construction. The resultant casualties and property losses motivated Stirling to invent a power cycle that operated without a high-pressure boiler.

Stirling Engine: Construction and Design | Genoastirling

The Stirling engine (or Stirling's air engine as it was known at the time) was invented and patented in 1816. It followed earlier attempts at making an air engine but was probably the first put to practical use when, in 1818, an engine built by Stirling was employed pumping water in a quarry. The main subject of Stirling's original patent was a heat exchanger, which he called an "economiser ...

Stirling engine - Wikipedia

Although, there some Stirling engine designs that use a flexible membrane to act as a power piston. The piston is pushed out when the working fluid (gas) is expanded enough to exceed the outside atmospheric pressure. This action is often helped along with the use of a flywheel.
