Classic Dijkstra algorithm in a SQL Server database

With Dijkstra's Algorithm, you can find the shortest path between nodes in a graph. Particularly, you can find the shortest path from a node (called the "source node") to all other nodes in the graph, producing a shortest-path tree. This algorithm is used in GPS devices to find the shortest path between the current location and the destination.

Dijkstra's Shortest Path Algorithm - A Detailed and Visual ...

The method returns a LineString instance with endpoints lying on the borders of the two non-intersecting geometry instances being compared. The length of the LineString returned equals the shortest distance between the two geometry instances. An empty LineString instance is returned when the two geometry instances intersect each other.
