In mathematics, a plane is a flat, two-dimensional surface that extends infinitely far. A plane is the two-dimensional analogue of a point (zero dimensions), a line (one dimension) and three-dimensional space. Planes can arise as subspaces of some higher-dimensional space, as with one of a room's walls, infinitely extended, or they may enjoy an independent existence in their own right, as in the setting of Euclidean geometry. When working exclusively in two-dimensional Euclidean space, the defin

The equation for cylinder is $x^2 + y^2 = 2x$ which can be written as $(x - 1)^2 + y^2 = 1$. Since the cylinder is not centered at origin using polar coordinates is counter-productive. Stick to cartesian coordinates and integrate in the region with limits from $y = -1 - (x - 1)^2$ to $+1 - (x - 1)^2$ and from $x = 0$ to 2 . share.
