logistics systems design and optimization

Abstract. A supply chain consists of all flows and transformations from simple raw materials to purchase of end-items by consumers. Various network nodes perform component fabrication, product assembly or sales. These activities, however, require logistical support, e.g., storage of intermediate or finished goods; consolidation of orders; and transportation.

Distribution Centres in Supply Chain Operations | SpringerLink

The logistics optimization service will inform the delivery workers of the ideal delivery route based on a range of information, including the real-time traffic situation, amount of cargo and the dimensions of the cargo truck. The system will also take into account the schedule of each branch.
