CONCLUSION. Therefore, I conclude that work is related to power. Power can be determined using work by considering the time. It is from its definition that power is the rate of doing work at specific displacement. The work has linear relation with displacement. If we increase the displacement twice, work is also increasing twice. For a horizontal path, power of a certain body moving along this ...

Summary on Work, Power and Energy - Jagranjosh.com

Work. refers to an activity involving a force and movement in the directon of the force. A force of 20 newtons pushing an object 5 meters in the direction of the force does 100 joules of work. Energy. is the capacity for doing work. You must have energy to accomplish work - it is like the "currency" for performing work.

Work, Energy and Power - Georgia State University

The work-energy theorem states that the net work done on an object equals the change in its kinetic energy. That is, when an external force moves an object through a distance it does work on the object which is evidenced by a change in its velocity or its kinetic energy, KE = ½mv 2.

Chapter 5: Work, Energy and Power

The normal force and the object's weight are in static equilibrium (they are balanced forces), the applied force, F, is an unbalanced force and will result in the object being accelerated across the top of the table's surface in the same direction as the force. This acceleration will change the object's velocity and subsequently its kinetic energy.
