The Scientific Guide to Global Warming Skepticism looks at both the evidence that human activity is causing global warming and the ways that climate ‘skeptic’ arguments can mislead by presenting only small pieces of the puzzle rather than the full picture. The Guide explains the science in brief, plain language without getting too technical. For those who wish to dig deeper into the science, more detailed treatments can be found at the following pages (often presented with varying levels ...

The Scientific Guide to Global Warming Skepticism

Climate change is real. Climate change is happening now. Climate change requires immediate and ambitious action to prevent the worst effects it can have on people and wildlife all over the world. We know that the planet has warmed by an average of nearly 1 °C in the past century. If we are to prevent the worst effects of climate change, there is global agreement that temperature rises need to be kept well below 2 °C from the pre-industrial era, with an ambition to keep it below 1.5 °C.
