Soil science - Wikipedia

Follett (2001) summarized the effect of soil management on soil organic carbon (SOC) as being attributed to: tillage and soil management systems; management to increase the amount of crop cover; and increased efficiency in the use of inputs (N and water) by the cropping system. To be able to assess how soil management practices may be changed to better respond to a changing climate requires that we understand how each of these factors affect the processes governing the emission of GHG.
