Apple Script

AppleScript is primarily a scripting language developed by Apple to do inter-application communication (IAC) using Apple events. AppleScript is related to, but different from, Apple events. Apple events are designed to exchange data between and control other applications in order to automate repetitive tasks.

AppleScript - Wikipedia

AppleScript is a scripting language created by Apple. It allows users to directly control scriptable Macintosh applications, as well as parts of macOS itself. You can create scripts—sets of written instructions—to automate repetitive tasks, combine features from multiple scriptable applications, and create complex workflows.

Introduction to AppleScript Language Guide

AppleScript is a powerful scripting language that comes built-in to OS X. The principal use for AppleScript is the automation of tasks that are normally repetitious and time consuming. For instance, as a freelancer, I hate creating invoices every week for my various clients.

The Ultimate Beginner's Guide To AppleScript

AppleScript is a language used to automate the actions of the Macintosh Operating System and many of its applications.

AppleScript: Beginner's Tutorial

This book is certainly the definitive text for really learning how to write AppleScripts. It is not easy, and it does not have a gentle intro that leads you into the language. The text assumes (perhaps more implicitly) that the reader knows something about a variety of other programming languages (PERL, Lisp come to mind).
