ENERGY CONVERSION EFFICIENCY. This is a simple but powerful definition of efficiency of a device that converts one energy form into another: It is a number between 0 and 1, or between 0 and 100%. The key word in the definition is useful (energy output). Were it not there, the efficiency of any device would be 100%, because of the law of conservation of energy (which states that energy cannot be created or destroyed).

Osterle was a pioneer in the study of electrokinetic energy conversion [42]. Because streaming current is generated within the electrical double layer, the phenomenon is confined to the range of the Debye length, λ_D , which characterizes the size of the layer. The Debye length varies with salt concentration, n , as $\lambda_D \propto n^{-1/2}$. Hence, for monovalent ions in the 1–10^{−5} M concentration ...
