Xml Fragment Vs Document - steadfastinsurance.co.za

The surprising part is because technically, a fragment is NOT a document. The way the XPathDocument does its magic is by creating a "transparent" root node, and holding the fragments

from it. I say it's transparent because your XPath queries can use the root node axis and still get properly resolved to the fragments:

Reading XML document fragments in .NET - Daniel Cazzulino ...

Fragments have their own life cycle apart from Activity. And an Activity may contain zero or more fragments. The main important feature of a fragment is we can reuse them anywhere. Here I will explain the basics of a fragment; that is, how we can add a fragment into our activity from the XML layout file. Please follow the steps.

Create Fragments From XML File In Android

If you ever find yourself appending a series of elements to the DOM, you should always use a DocumentFragment to do just that. A DocumentFragment is a minimal document object that has no parent.

Why you should always append DOM elements using ...

The DocumentFragment interface represents a minimal document object that has no parent. It is used as a lightweight version of Document that stores a segment of a document structure comprised of nodes just like a standard document. The key difference is due to the fact that the document fragment isn't part of the active document tree structure.

DocumentFragment - Web APIs | MDN

The Fragment library also provides more specialized fragment base classes: DialogFragment Displays a floating dialog. Using this class to create a dialog is a good alternative to using the dialog helper methods in the Activity class, as fragments automatically handle the creation and cleanup of the Dialog. See Displaying dialogs with DialogFragment for more details.

Create a fragment | Android Developers

It is used as a light-weight version of Document to store well-formed or potentially non-well-formed fragments of XML.
