Face of an individual has several different types of exclusive

features and thus important in identification and recognition of a person. Sometimes body cannot be identified as its face is not recognised due to destruction by an animal or decay caused by environment. Facial reconstruction allows visual identification by individual family and associates to become easy and defined. Recognition allows the involved government agencies to make the list of suspected victims.

Facial reconstruction - SlideShare

Forensic facial reconstruction is the process of recreating the face of an individual from their skeletal remains through an amalgamation of artistry, anthropology, osteology, and anatomy. It is easily the most subjective—as well as one of the most controversial—techniques in the field of forensic anthropology. Despite this controversy, facial reconstruction has proved successful frequently enough that research and methodological developments continue to be advanced. In addition to ...
